

ABSTRACT OF THE DISCLOSURE

A riser section and cover is disclosed. The riser section has a smooth cylindrical sidewall surface, a removable anchor tab on the exterior surface and bosses and ribs on the inside of the sidewall. The riser sections are stackable. The cover has a channel end to removably connect to a riser section. The cover has stowable handles and posts extending from a bottom surface that define wells open at a top surface and which posts fit into the wells of another cover. A bracket is disclosed to releasably secure and position the cover with an attached riser section on a concrete form wall to hold the riser in place while concrete is poured into the form.
